Is technology making us less capable of concentrating, thinking deeply, and learning effectively, or are we simply learning to use our attention in different ways?

Nowadays the technology has given us a lot of benefits that allow us to obtain information faster than before. However, something that has been affected is our attention.

In the video, the woman mentions that it is complicated to define what the attention is, she tries to give an accurate answer and in this attempt she talks about something that I consider essential: all the environmental factors. When we are focusing our attention in something, there are factors that we can not control that are able to interrupt our attention, for this reason paying attention is a process that requires an effort, not only to ignore external factors, but also to keep the main idea and do not lose the threat of the idea that we are receiving.

In this order the ideas, technology has brought up another important factor to this process: overstimulation. Now,

What about your experience?
