POOR! DIFFICULT TO UNDERSTAND AND WITH LOTS OF GRAMMAR AND STRUCTURE MISTAKES!

Valentina Cespedes

Is technology making us less capable of concentrating, thinking deeply, and learning effectively or are we simply learning to use our attention in different ways?

The brain is a complicated world that implies a lot of connections and effects even for the more GR basic human need such as thirst and hunger. With the technological and WO annual scientific started to recognize a decrease in people's attention, however, it is not scientific claims? to scroll and spend hours on cellphone. Resting, having a balance GR diet, reading, writing a just? Challenge the cognition once per day it is enough to keep the attention longer. The brain is like a cpu not just GR save but steer the body and neurons WW functions implying a lot of work at the same time but most of the time people are no SP conscious about that. In this order, we simply GR learning to use our attention in x different ways that + is important + returns which things deserve more GR attention than others. Instead of watch GR tik tok trends, it will be very useful to scroll in profiles with educational and critical content with a limited period of time or take advantage of AI and learn something new. The only ways that people can concentrate better is + resting and eating well and be conscious with how + spend their time and what they can learn with that.
