Astrid Eliana Herrera

According to the documentary, techology has the capacity to shape our brains attention in a positive or a negative way. It can mantain our attention conscious or unconscious regarding what we are doing. Therefore, technology can make us less capable of concentrating, thinking deeply, and learning effectively; depending on the content that we consume.

Fust of all, as the woman explains during the video, material is designed with different purposes. One of them is to remain people focused and concentrated in the information to make them go deeper and deeper.

Secondly, people also can be just skimming content without being attentive in only one task. Instead, this kind of content is designed to keep people scrolling multiple tasks. That is why, as the woman says, technology can shift our brains. It could be in a negative of? positive way.

Finally, in my opinion, these arguments are true for me. In my experience, if you do not know how to manage those kind of resources, you can fall down in the manipulation of those who want to control our brains as same as our actions, our thoughs. As in the video mention conscientiously or unconsciously, we can be victims of their projects.
