Daniela Alejandra Morales Prado.

Is technology making us less capable of concentrating, thinking deeply, and learning effectively, or are we simply learning to use our attention in different ways?

Nowadays, social media and different bussiness platforms are trying to sell us the idea that multitask equals efficency or productivity, but this could not be further from reality. Technology is definitely making us less capable of concentrating for long periods of time, our critical and deep thinking skill are reduced significantly and our learning abilities are strongly damaged as well, all of this due to the short and attractive spans we find daily.

As mentioned in the episode, big companies and strong content producers are the ones in charge of the way our brains are functioning, the more scattered our attention is, the easier it is for them to control what we buy and even how we think. Personally, I consider that our ability to concentrate can be improved if we start ~~by~~ being aware of the contents we consume through our phones daily; doing different activities such as reading an actual physical book can benefit us too.

VERY GOOD!

I REALLY ENJOYED READING YOUR IDEAS!
