Kanopy: Writing activity - An essay

Cesar Pineda

In the documentary "Are New media shortening Attention spans?: How digital technology shape us" there are several thing GR to take into account in order to understand our relationship with technology. As it was shown in the documentary technology has shaped or reshaped professions, for example medicine and teaching. Medicine on one hand has expanded there GR limits of operational field thanks to technology, saving more lifes GR-SP and attending more pacients SP. On the other hand P teaching has become much more difficult because of the lack of long term attention of the students, making them unable to read a complete book. Talking about young population P multitasking has become something very useful, and used, but technology was the reason for this multitasking we do everyday, and in my opinion it is better to do one thing right than to do many things wrong.

In my personal opinion as a student P technology has helped me a lot. From virtual classes SP-GR on the pandemic to communicate wheter + is going to be a class or not. I have had to re-learn how to use thechnology many many times because + it's something in contrive development, so I'am developing myself as well.

Finally, as an advice GR to concentrate is to connect with the real world, do activities like playing an instrument, doing sports SP or as simply to drink a coffe SP with a friend are things GR that makes you connect with the real world and improve the concentration. Offcourse SP you have to do those activites not + using your phone.

NEEDS TO IMPROVE !
