Nicolle Caterin Ruiz Arias

- Technology GR making us less capable of concentrating and thinking deeply because our attention is less.

Two important ideas are technology GR complicate our attention and social media impedes thinking deeply. Technology give GR us all we want to investigate WW but, sometimes our attention is lost, we only consider the things that are in our cellphone and we do not see our real world. In WW the other hand, social media impeder us to think deeply, we prefer to see short videos, short stories but we forget GR think deeply by our own brain.

Multitasking and + human brain are two things that we need to keep in mind. Nowadays, some people can not different GR-WW things at the same time because they are so distracted. After all, the human brain is complicated, our brain do GR things concious or implicit. For this reason, sometimes we do not think about what we do or not.

Finally, me as a student and technology user. I agree with the video because sometimes I am distracted because of technology, I prefer GR see short videos, or read small texts. To summarize, I suggest that people do their things without technology or try to do it to improve their concentration and be confident with their own opinion to think deeply and think for yourself.
